                                                         (Promegal. cDNA was synthesized using both random and oligo(df) primers in separate reactions and equipped with BooRI adaptors. Library was size fractionated on aganose gels (for insert size y400b) and non-directionally cloned into RooRI-disected pUC19 vector. Blue/white selection on carbenticillin-containing places was used to recover positive clones.

             /olone libe"1000 - Unique E from Maire Genome Project" (notee "This library represents the unique ESTs found in the first round of EST sequencing at Stanford University for the maire genome project. Sequences are present from libraries 486, 487, 495, 603, 605, 606, 611, 618, 660, 687, 670, 707, and 945. Contigs were assembled using TIGN'S CAP program and a representative EST from each contig was elected for the Universe est. All singlets were also selected.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

of Molecular and thuman Genetics Baylor College of Medicine, Ome Baylor Plaza, Houston, T77030, USA Of Nov 19, 2002 this sequence version replaced gir23101016. The sequence in this assembly is a combination of BAC based reads and whole genome shotgum sequencing reads assembled using Atlas (http://www.lage.bom.tmc.edu/projecte/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-casffold'). Within sach contig-casffold assembly (a 'contig-casffold'). Within sach cortis-casffold and optanted, and separated by streed paps filled with Ms to the serianted size. The sequence contigs within a contig-casffold that continue that the contigue that the contigue that the contigue the contigue that the contigue the contigue that the contigue that the contigue that the contigue the contigue that the contigue that

Mar to Submitted (10:48X-2003) Human Genome Sequencing Center, Department to Molecular and Human Genetics and Suprior College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:4481820.
The sequence in this assembly is a combination of BaC based reads and whole genome shoragm sequenciny reads assembled using Atlas (http://www.hggc.bem.tmc.edu/projecte/rat/). Each contig described in the feature thale balow represents a conficial in the Atlas assembly (a 'contig-scaffold'), Within each contig-scaffold in the Atlas assembly (a 'contig-scaffold'), Within each contisted and separated by sized gaps filled with Ms to the estimated size. The sequence may extend beyond the ends of the Jone and thore may be sequence contigs and thin a contig-scaffold that consist entirely of whole genome shought separated reads. Both come and thore may be sequence contigs within a contig-scaffold that consist entirely of whole genome shough separated reads. Both ends sequences and whole genome Auyalebechi, V., Aoyagi, A., Ayodeji, M., Bada, E., Badeh, M., Benahmed, F., Balderin, D., Bandarmanike, D., Barber, M., Barnstead, M., Benahmed, F., Bisea, D., K., Blair, J., Blankenburg, K., Blyth, P., Brown, M., Bryant, M., Blayart, M., Barkenburg, K., Blyant, M., Barnstead, M., Carteron, M., Bryant, M., Carteron, M., Carteron, M., Carteron, M., Carteron, M., Carteron, C., C Direct Submission
Direct Submitted (17-SEP-2001) Human Genome Second Molecular and Human Genetics, Baylor Plaza, Houston, TX 77030, USA Unpublished Allen, C., Allen, H., Alsbrooks, S., Direct Submission Rat Genome Sequencing Consortium. Within each contig-scatfold, individual sequence contig are ordered and ordered, and separated by sized gaps filled with Ns to the seriameted size. The sequence may extend beyond the ends of the close and there may be requence contigs within a contig-scatfold that consist entirely of whole genome shortgum sequence scated. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        shotgun sequence only contigs will be indicated in the feature

```

individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ms to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-seaffold that consist entirely of whole genome shotgum sequence reads. Both end sequences and whole genome On Oct 12, 2002 this sequence version replaced gi:21/7/200.
The sequence in this assembly is a combination of BMC based reads
and whole genome shortgun sequencing reads assembled using Ralas
(http://www.hgc.bmt.tnc.ed/projecter/arx/). Each counting decorabed
in this feature table below represents a scaffold in the Atlas
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig'-carfold'). Within ach (contig'-scaffold, shotgun sequence only contigs will be indicated in the feature Genome Center

(see http://www.hgsc.bom.tuc.edu/docs/denbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and thair order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence NOTE: Estimated insert size may differ from sequence length be preserved as soon as it is available and the accession number will Center project name: GW20-46088

AL Submitted (16:NOV-2001) Wellcome Trust Sanger Institute, Hinton, cabbilities (16:NOV-2001) Hellcome Trust Sanger Institute, Hinton, cabbility Cable (16:Nov-2001) Hellcome requests: clonerequest@sanger.ac.uk on Oct 29:201 this sequence version replaced giisSilli3. During sequence assembly data is compared from overlapping clones. Where differences are found these are amoutated as variations together with a note of the overlapping clone, as we submit sequences with variation mortation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality > 301); an attempt was made to response all sequencing problems, such as compressions and repeate; all regions were covered by at least one plasmid abbclume or nore than one Mis subolume; and the seembly was confirmed by restriction digest: The following above abbreviations are used to associate primary accession numbers given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             39667

LOCUS AX028511 31 bp DNA linear PAT 16-SEP-2000 DEFINITION Sequence 14 from Patent WO0042216.

DEFINITION Sequence 14 from Patent WO0042216. ACCESSION AX028511

VERSION AX028511.1 GI:10189694

KEYWORDS

SOURCE Homo sapiens (human)

ORGANISM Homo sapiens

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

REFERENCE 1

AUTHORS Kusk, P.

TITLE Genetic predisposition

JOURNAL Patent: WO 0042216-A 14 20-JUL-2000;

OSTEOMETER BIOTECH AS (DK) ; KUSK PHILIP (DK)

FEATURES Location/Qualifiers
